

Marbach Bench-Top Die Cutter

We have a Marbach bench top die cutter with a 4 inch footprint. It is a small version of a commercial die cutter. We are able to produce technically correct scores for a wide range of board calipers. We evaluate score cracking complaints by scoring board with the correct scoring geometry at 50% RH, 20% RH, and on oven dry board. This is an excellent tool for evaluation of scoring issues. We also are able to show the effect of using incorrect scoring geometry.
